

30 YEARS OF P.S. TRADING

We are a Polish company with Dutch roots, which started its activities in 1992.

In the 1990s we were pioneers in supplying excellent quality blades, drills and hole saws to Polish shops - under the well-known and still recognizable brand CONDOR.

Over 30 years, we have expanded and modernized our range, introducing new brands and product types. Today, we have almost 5,000 of them in our range - and we still specialize in power tool accessories and hand tools, which we offer under our own brands: Ster'g, DREL, Waart, JUFISTO and JUFISTO Garden.

waart

A modern brand for professionals, based on 30 years of experience. It was designed to intensively expand distribution in EU countries and meet its high requirements. We used many years of experience of engineers and practitioners to create it.

Waart is the tools and power tool accessories for active, conscious professionals who value their time and skills. An extensive portfolio will enable the implementation of the most ambitious professional challenges. The quality of our blades, drills, hole saws and hand tools has been appreciated for years by mechanics, plumbers, electricians, roofers, locksmiths and other specialists in the construction and finishing industry. We appreciate the professionalism of contractors and our business partners.

That is why our ambition is to set trends with respect to functionality of tools and quality of packaging. We have designed our packaging in such a way to facilitate the process of selecting the right product and improve the effectiveness of brand exposure. For us, professionalism is also a responsibility, which is why we do not cease in our efforts to ensure that our tools function as long as possible, and the packaging is made of recyclable materials. We also use FSC®-certified wood for our tools. When you buy FSC®-certified products, you are caring for forests around the world.

We are convinced that it is good to be a Professional.

IT'S GOOD TO BE A PROFESSIONAL

High-quality JUFISTO roofing burner with a single nozzle 60 mm in diameter.

Application:

- laying of heat-welded roofing papers on buildings, shed and roofs
- soldering, flame cleaning, welding, thawing, hot-melt gluing, drying concrete, weed burner

- Max. temperature: 1400 ° C
- Feed gas: propane butane
- Overall length: 88 cm
- Hose length: 5 m

Flame retardant metal alloy nozzle with exceptional durability.

Equipped with piezo ignition - when you press the switch, the burner is ready to work.

Ergonomic handle and the rubber covering the grip's surface ensure safe and comfortable use.
